Quick info

Listing type: For sale

Description

Save time and money by purchasing this low hour JMB VL3 915iS RG with Duc Tiger 4 blade. Save over \$100,000 off a new order and save 18 months delivery time. Avoid any possible tariffs by purchasing this VL-3 that is already registered in the USA. This VL-3 features upgraded paint livery, interior options and a full IFR platform. This aircraft also has the XL seating position and adjustable pedals for taller pilots. If you are not a tall person we can make modifications to accommodate smaller pilots as well. Please note this plane is sold with the Duc Tiger 4 blade propeller, this is the latest and greatest propeller offered from Duc. Please feel free to call with any questions. Sold by authorized JMB Aircraft dealer in Mansfield OH. Financing is available. Please make sure and watch the walk around video shown in the video section of this listing.

Add Details

Manufacturer year: 2022

Serial number: VL-3-489

Total airframe time: 129

Airframe Total time: 129**Engine 1 hours:** 129 SNEW**Propulsion:**

Rotax 915iS with a Duc Tiger 4 Blade

Propulsion:

The TIGER propeller, with its new exclusive profile developed for fast planes, has been developed through CF (ANSYS).

Optimized for **low noise emission** and highest efficiency than ever (**Takeoff** | **Climb** | **Cruise**) with the best efficiency ratio.

It follows a high-precision Carbon manufacturing process, with a 3D metallic leading edge protection and composites blades & hub.

These technical innovations have several effects:

- **High efficiency throughout the entire flight envelope**
- **Low fuel consumption & noise reduction**
- **High operating comfort**

Equipped with grade 5 titanium hardware, this technology and manufacturing level and requirement degree have advancement. Their variable pitch carbon hub system allows a wide range of angle variation, while being secure locking step system.

The setting of the pitch angle of the blades is "Constant Speed", in other words managed automatically by a hydraulic system that regulates the propeller pitch according to its engine speed setting.

The pitch variation is done by the hydraulic power and the governor adjustment control is simply mechanical, the electric current is consumed for this type of hydraulic variable pitch propeller.

Reference	01-86-005
Dimensions	Ø1620 → Ø 1780
Propulsion	Tractor
Power	140 - 215 HP
Number of blades	4
Weight	8.50kg
Weight	18.70lbs
Type	Inflight adjustable
